

Next speaker: Helge Fredriksen

UiT – The Arctic University of Norway

With the support of the
Erasmus+ Programme
of the European Union

Combining inquiry-based learning with flipped classroom teaching of linear algebra in a digital environment

Helge Fredriksen, UiT - The Arctic University of Norway (UiT)

Josef Rebenda, Brno University of Technology (BUT)

Joint Czech-Norwegian initiative for the development of a modern mathematics education for engineers supported by EEA Grants

Introduction

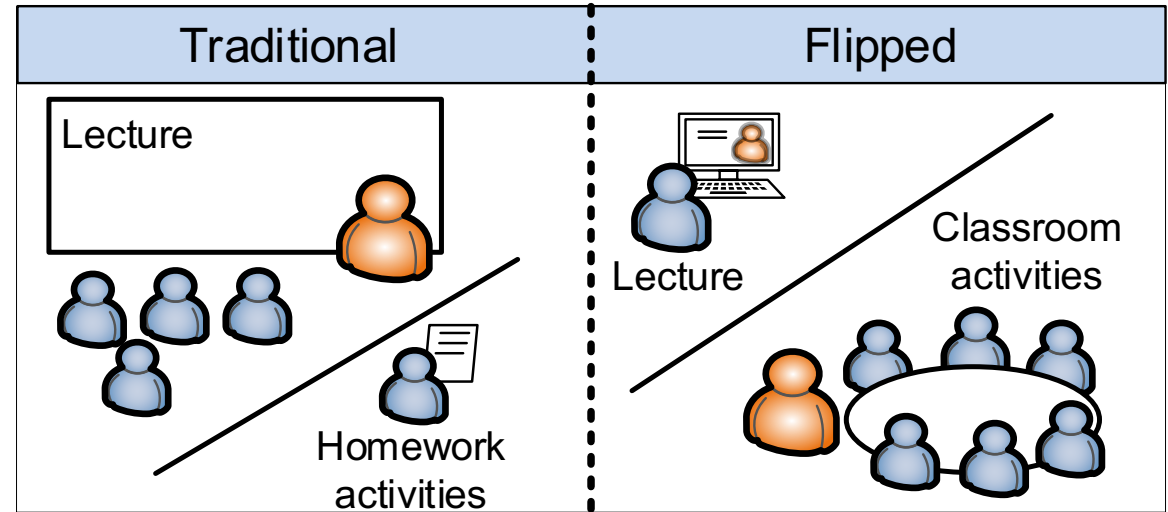

- Why?
 - Promote active engagement and conceptual thinking in teaching mathematics to engineering students
 - Illustrate how linear algebra can be used in the real world
 - Research and develop together to learn more on active learning approaches
- Who & when?
 - Group of Norwegian students at UiT (Bodø) in April 2021
 - Group of international students at BUT (Brno) during fall 2021.
- How?
 - New material: Videos and tasks for two sessions
 - Inspiration: The work of the IOLA group (Inquiry-Oriented Linear Algebra) (<http://iola.math.vt.edu/>)

Setup

- Two flipped classroom sessions
- Students prepare out-of-class to «lecture-free» lessons utilizing a set of short videos
- Students work on inquiry-based tasks in-class
- To enhance the collaborative nature of inquiry the students were divided in groups

Mathematics

Three interpretations of the linear matrix equation $Ax = b$

- System of linear equations
- Linear combination of vectors
- Linear transformation of a vector

Linking the interpretations

sobota 6. února 2021 21:54

Choose one of the tasks, the one you like, and start working on it.

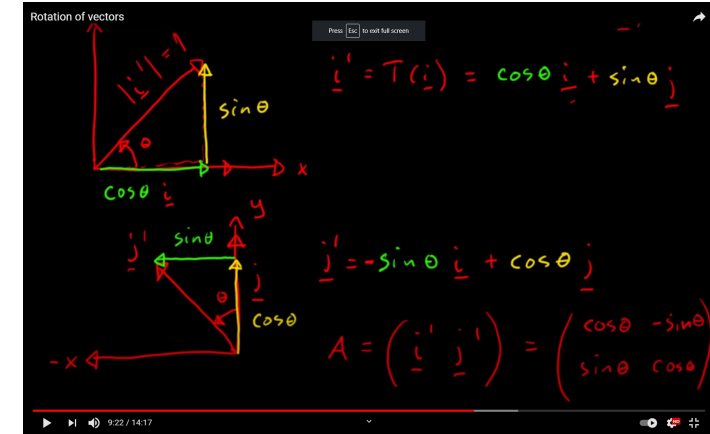

Conclusion: The matrix equation links all three interpretations. It means that although the tasks seem different, they are same in some sense.

Videos

- Videos for two sessions prepared:
 - Introduction to/repetition of theory
 - Applications
- 4 videos recorded for each session
- Format: Screen-recorded «chalk-and-talk» on a virtual blackboard

Tasks

Session 1: Introduction to/repetition of theory

- Lines and planes
- Linear transformations
- Linear combinations

Session 2: Applications

- Markov chains
- Font transformation
- Mars exploration

Se nå på en fjerde vektor \vec{v}_4 :

a) Er det mulig å uttrykke \vec{v}_4 ved hjelp av en lineær kombinasjon av \vec{v}_1 og \vec{v}_2 ? Hva med \vec{v}_1 og \vec{v}_3 ? Og \vec{v}_2 og \vec{v}_3 ? (dere trenger nødvendigvis ikke finne konkrete tall for å uttrykke disse kombinasjonene)

b) Er det mulig å uttrykke \vec{v}_4 som en lineær kombinasjon av alle tre vektorene \vec{v}_1 , \vec{v}_2 og \vec{v}_3 ? Hvordan kunne vi skrive det? Prøv å finn en slik lineær kombinasjon.

Task 2)

How would the letter N over (the version on the left-hand side) be transformed if you use these transformation matrices:

$$A = \begin{pmatrix} -3/2 & 0 \\ 0 & 5/3 \end{pmatrix}$$

$$B = \begin{pmatrix} -1 & -1/3 \\ 0 & -1 \end{pmatrix}$$

$$C = \begin{pmatrix} -1/2 & 1 \\ -1 & 0 \end{pmatrix}$$

Task 3)

What would the transformation matrix do to the letter Q?

Flipped Classroom sessions

- 4 students participated online via Teams
- Students used to FC teaching
- 2 pairs working on separate tasks
 - Utilizing breakout rooms in Teams for the group work
 - Teacher guidance
- Plenary walkthrough during the last part of the session
 - Each pair presented their work

Handwritten text on the whiteboard:

\vec{u}_2, \vec{u}_3 og \vec{u}_4 er også uavhengige,
så \vec{u}_5 kan uttrykkes som en kombinasjon
av disse.

(e) $\vec{u}_1 \cdot x_1 + \vec{u}_2 \cdot x_2 + \vec{u}_3 \cdot x_3 + \vec{u}_4 \cdot x_4 = \vec{u}_5$

(f) 1. $\vec{u}_1 = [1, 0, 1]$ $\vec{u}_2 = [0, 2, 0]$ $\vec{u}_5 = [-2, 1, -1]$

$\vec{u}_1 \cdot x_1 + \vec{u}_2 \cdot x_2 = \vec{u}_5$

$$\begin{pmatrix} 1 & 0 & -2 \\ 0 & 2 & 1 \\ 1 & 0 & -1 \end{pmatrix}$$

Questionnaire

Likert scale mostly, some free-text questions

- Videos
 - Helpfulness to become more active in discussions
 - Clarity and usability of the content
- Group work
 - How did the discussions affect your understanding
 - Working in breakout rooms
 - Understanding the given tasks
- Use of digital tools
 - GeoGebra, Matlab

Spørreundersøkelse angående de siste to øktene i lineær algebra - Saved

Questions Responses 4

Vi ønsker med dette å stille dere noen spørsmål angående øktene i lineær algebra der vi så litt dypere på forskjellige tilnæringer til matriseligningen $Ax=b$. Spørreundersøkelsen tar ca. 5 minutter å svare på.

Section 1

Videoene

Noen spørsmål om videoene

1. Spørsmål om videoene *

	Svært lite	Lite	Noe	Mye	Svært mye
Hvor mye fikk du sett av videoene?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Hvordan påvirket bruken av engelsk som språk i videoene din forståelse?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Var innholdet i videoene tydelig/forsto du innholdet?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Fikk du til å bruke kunnskapen som du hadde fra tidligere?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Results

- Two sets of data from the intervention:
 - Teachers' observations of students work in groups (one group in particular)
 - Answers to the questionnaire
- The first test of a combined IBME and FC experience
 - Positive student feedback
 - Students were not definitely positive on spending more time on this type of teaching and learning
 - Data: Few students in the intervention -> not sufficient data

Student feedback

- Positives:
 - Collaboration: Enhanced focus on discussions/joint work on tasks
 - Videos: Important for the groupwork
 - Digital tools: Breakout rooms, GeoGebra
- Negatives:
 - Collaboration: Fluency of workflow
 - Digital tools: Shared whiteboard function requires touchscreen or tablet based input device
